

Safety couplers **prevoS1**

The name **prevoS1** means an investment in top of the line quality and technology.

prevoS1 technology is protected by patents and complies with all current industry standards.

These innovative qualities makes the **prevoS1** the most technologically advanced coupling on the market.

One simple push of the button!

- **1 PRESS =**
decompression
+ disconnection
⊕ No risk of "hose whip", no danger to the operator, tools or surrounding products.

- **Optimized flow rates**
Maximize tool efficiency ex. large tools, jacks, paint guns, etc.
No valve spring = no turbulence or large drops in pressure when air passes through the coupler.
- **Anti-static**
Prevents the build-up of static electricity.
⊕ Eliminate contaminates in the air line that cause surface imperfections during paint or varnish applications.

■ Anti-scratch

Protect fragile surfaces in auto body shops, assembly lines, wood industries, etc.

■ Light and compact.

Comfortable for all day use

⊕ Improve performance and efficiency on assembly lines and workshops.

■ Button color code

Quickly identify the profile from a distance

⊕ Eliminates the risk of connection errors that can lead to accidents or damages to equipment

■ Easy identification

Part numbers are laser printed on each coupling.

prevoS1 couplers are silicone free.

⊕ To avoid the risk of contaminating the compressed air during the application of paint or varnish (surface imperfections).

Reduces the risk of explosions in paint booths, grain transfers, etc.

Compatibility with gas zones classified 1 and 2 and dust zones classified 21 and 22.
